**IT'S NOT ROCKET SCIENCE**

# Between **evidence** and **innovation**

Today everything is moving fast: new technologies, digital tools, increasingly high-performing materials. In Periodontology and Implantology, innovation is a constant drive, but... how can we distinguish what really works from what is just a "trend"?

This course was created precisely for this reason: the need for a firm point in the midst of change. A moment of exchange for those who want to keep up with the times but with their feet on the ground. Because innovating is important, but doing so with solid evidence is what truly makes our work effective.

From diagnosis to clinical protocols, from surgery to digital workflows, we will explore together the present and future of the discipline, with practical language, real cases, and a critical look at what really matters. Because the future is now, and it must be faced with awareness.

**Innovate with wisdom.**

**Treat with science.**

**Grow with balance.**
