# Clinical and Biological Parameters for Implant Success: How to manage and prevent complications

## BOLOGNA 2017, MAY 19-20

### PRESENTATION

*Implant supported prosthesis is daily needed to substitute compromised or lost teeth. Scientific literature supports the evidence that this solution is not free from biological, biomechanical and esthetic complications, especially for periodontal patients.*

*Clinical research demonstrated that biofilm disruption, risk factors control, appropriate hard and soft tissue reconstructions are needed to obtain short and long term clinical success in implant therapy.*

*This updating meeting will focus on the dental implants in patients with history of periodontal disease: what is the best prosthetic solutions, how to manage complications and how to retreat in case of failure?*

*We are looking forward to meeting you in Bologna!*

Claudio Gatti

President SidP

Francesco Cairo

Course-Cordinator

**Coordinator:** Francesco Cairo, Firenze

### Friday, 19 May 2017

# Clinical and Biological Parameters for Implant Success: How to manage and prevent complications

**BOLOGNA 2017, MAY 19-20**

- 12.15pm-02.00pm *Lunch time*
- 02.00pm-03.30pm **What happens performing Implant-Prosthetic therapy without a correct Prosthetic examination**  
Stefano Gracis, *Milano*
- 03.30pm-04.30pm **What are Implant and Prosthesis malpractice complications?**  
Paolo Casentini, *Milano*
- 04.30pm-05.00pm *Coffee break*
- 05.00pm-06.00pm **How to manage Implant-Prosthetic mistakes from a missed preliminary Prosthetic Analysis**  
Stefano Gracis, *Milano*
- 06.00pm-06.30pm Discussion

## **Saturday, 20 May 2017**

- 09.00am-10.30am **How to manage Implant-Prosthetic mistakes from a missed preliminary Periodontal analysis**  
Carlo Tinti, *Flero BS*
- 10.30am-11.00am *Coffee break*
- 11.00am-12.30pm **How to manage malpractice in complex cases**  
Paolo Casentini, *Milano*
- 12.30pm-01.00pm Discussion

**The official language of the Course is Italian.**
