LA PIANIFICAZIONE VIRTUALE 3D

Michael R. Norton

The field of implant dentistry has overseen some dramatic advances over the last decade. No more so than the introduction of virtual 3D planning to allow the visualization of an intended surgical field in 3 dimensions with an ability to visualize vital structures and the 3-dimensional, spatial relationship between virtually planned implants and these structures.

This lecture will introduce Facilitate™ (Astra Tech) one such system designed to allow both virtual planning and the execution of the virtual plan to a high degree of accuracy. Both the pros and cons of such a technique will be discussed.
