In dentistry, every decision leaves a mark. A small mistake today can turn into a major complication tomorrow. This is why thoroughly understanding risks, anticipating the unexpected and learning from other's experiences (and mistakes) is essential for true professional growth.

In the clinical scenario, even the simplest case can hold surprises. Diagnostic errors, surgical complications and unexpected prosthetic outcomes are part of the profession, but recognizing, preventing and managing them with clarity is what distinguishes a truly prepared clinician.

"What Goes Around Comes Around" is the Course designed for those starting their clinical journey with awareness and for experienced professionals who know that learning never ends. We will analyze real cases, discuss common and uncommon complications and share practical solutions to implement immediately in daily practice. With the right tools, even complications become opportunities for growth.

- Learn to recognize errors.
- Manage complications.
- Grow as a professional.

Join us and stay one step ahead —
before "what goes around"... truly comes around.
